

The Geospatial Information Authority of Japan (GSI) promotes the utilization of geospatial information and contributes to the improvement of citizens' life and sound progress of the national economy through measures regarding land surveying and mapping.

**P. 01** Surveying

— Establishing position references

International standards are created and used as a basis for managing and providing Japanese position references.

**P. 05** Portraying

— Mapping Japan

The map of the entire land of Japan, which serves as the basis for all maps, is maintained and updated.

**P. 09** Safeguarding

— Protecting national land of Japan

During times of disaster, surveying and cartographic techniques are utilized to quickly grasp the situation and provide geospatial information.

**P. 13** Conveying

— Transmitting the situation of national land of Japan

Information that is useful for understanding the risks of natural disasters is conveyed in an easy-to-understand format.

**P. 17**  
Promoting the administration of surveys

**P. 19**  
Advancing utilization of geospatial information

**P. 20**  
Research and development to create a more resilient country for the future

**P. 21**  
Global activities

**P. 22**  
The Science Museum of Map and Survey

**P. 23**
