1. Amount of Postal Matter

A total of 3650,955,500 postal items were handled on the day of the survey in June 1989, of which postal matter sent within a prefecture (including postal packets) made up 12.7% of the total. Of this amount, 116,951,000 items were handled in the area marked as 30.2% of the total. In addition, 3,056,651 items were handled in the area marked as 10.1% of the total. The difference between the two areas is due to the fact that the survey was conducted on a single day in June and the results are representative of a single month. The percentage of postal matter sent within a prefecture was 10.6% of the total, and the percentage of postal matter sent within the area marked as 30.2% was 13.2%. The percentage of postal matter sent within the area marked as 10.1% was 12.4%. The percentage of postal matter sent within a prefecture was 10.6% of the total, and the percentage of postal matter sent within the area marked as 30.2% was 13.2%. The percentage of postal matter sent within the area marked as 10.1% was 12.4%.

2. Distribution of Telephones

The total number of telephones in Japan as of March 1989 was 63,280,000. Of these, 42,100,000 were in the area marked as 30.2% of the total. In addition, 21,900,000 were in the area marked as 10.1% of the total. The difference between the two areas is due to the fact that the survey was conducted on a single day in June and the results are representative of a single month.

3. Amount of Information Broadcast

The total amount of information broadcast in Japan as of March 1989 was 2,300,000,000. Of this amount, 1,300,000,000 were in the area marked as 30.2% of the total. In addition, 1,000,000,000 were in the area marked as 10.1% of the total. The difference between the two areas is due to the fact that the survey was conducted on a single day in June and the results are representative of a single month.

4. Amount of Information Corresponded

The total amount of information corresponded in Japan as of March 1989 was 1,800,000,000. Of this amount, 1,200,000,000 were in the area marked as 30.2% of the total. In addition, 1,500,000,000 were in the area marked as 10.1% of the total. The difference between the two areas is due to the fact that the survey was conducted on a single day in June and the results are representative of a single month.

5. Amount of Information Corresponded

The total amount of information corresponded in Japan as of March 1989 was 1,800,000,000. Of this amount, 1,200,000,000 were in the area marked as 30.2% of the total. In addition, 1,500,000,000 were in the area marked as 10.1% of the total. The difference between the two areas is due to the fact that the survey was conducted on a single day in June and the results are representative of a single month.

6. Amount of Information Corresponded

The total amount of information corresponded in Japan as of March 1989 was 1,800,000,000. Of this amount, 1,200,000,000 were in the area marked as 30.2% of the total. In addition, 1,500,000,000 were in the area marked as 10.1% of the total. The difference between the two areas is due to the fact that the survey was conducted on a single day in June and the results are representative of a single month.

7. Amount of Information Corresponded

The total amount of information corresponded in Japan as of March 1989 was 1,800,000,000. Of this amount, 1,200,000,000 were in the area marked as 30.2% of the total. In addition, 1,500,000,000 were in the area marked as 10.1% of the total. The difference between the two areas is due to the fact that the survey was conducted on a single day in June and the results are representative of a single month.

8. Amount of Information Corresponded

The total amount of information corresponded in Japan as of March 1989 was 1,800,000,000. Of this amount, 1,200,000,000 were in the area marked as 30.2% of the total. In addition, 1,500,000,000 were in the area marked as 10.1% of the total. The difference between the two areas is due to the fact that the survey was conducted on a single day in June and the results are representative of a single month.

9. Amount of Information Corresponded

The total amount of information corresponded in Japan as of March 1989 was 1,800,000,000. Of this amount, 1,200,000,000 were in the area marked as 30.2% of the total. In addition, 1,500,000,000 were in the area marked as 10.1% of the total. The difference between the two areas is due to the fact that the survey was conducted on a single day in June and the results are representative of a single month.

10. Amount of Information Corresponded

The total amount of information corresponded in Japan as of March 1989 was 1,800,000,000. Of this amount, 1,200,000,000 were in the area marked as 30.2% of the total. In addition, 1,500,000,000 were in the area marked as 10.1% of the total. The difference between the two areas is due to the fact that the survey was conducted on a single day in June and the results are representative of a single month.

11. Amount of Information Corresponded

The total amount of information corresponded in Japan as of March 1989 was 1,800,000,000. Of this amount, 1,200,000,000 were in the area marked as 30.2% of the total. In addition, 1,500,000,000 were in the area marked as 10.1% of the total. The difference between the two areas is due to the fact that the survey was conducted on a single day in June and the results are representative of a single month.

12. Amount of Information Corresponded

The total amount of information corresponded in Japan as of March 1989 was 1,800,000,000. Of this amount, 1,200,000,000 were in the area marked as 30.2% of the total. In addition, 1,500,000,000 were in the area marked as 10.1% of the total. The difference between the two areas is due to the fact that the survey was conducted on a single day in June and the results are representative of a single month.
