

3D GSI Maps Gallery

[Hokkaido] Hagoromonotaki
Located in Higashikawa Cho, Hokkaido.
One of Japan's listed 100 waterfalls.

Obara in Shiroishi Shi
A rocky column formed when magma cooled and solidified.

Aogashima
Located 358km south from Tokyo.
The double-layered caldera topography is impressive.

Yurigatake
A mountain land with pointed peaks, with the mountain surface having been carved under the flow of glaciers.

Yui in Shizuoka Shi
A sharp mountainous district around the Suruga Wan. Landslide countermeasure project are also in effect.

Rokko Sanchi
Many mountains spreading across 30km to the east and west.
Town areas are spread out at the foot of the mountains.

Shionomisaki
An island that has been formed naturally by deposits of sand, due to the local flow of ocean water, to be connected to the main island.

Yashima in Takamatsu Shi
A table-shaped plateau surrounded by steep cliffs. It really is perfectly flat.

Kiragawacho in Muroto Shi
Stair-shaped topography can be seen around the coast. A coastal terrace.
